Mihai Vlad

FRONT-END DEVELOPER | AGENCY SUPPORT

Moldova | Remote | UK-friendly hours | Available for scoped projects

mihai173svlad@gmail.com Portfolio LinkedIn

PROFILE

Early-career front-end developer with **2+ years of independent practice**, a strong work ethic and a fast learning curve. I adapt quickly to new workflows, take ownership of assigned tasks and become deeply invested in the projects I support. I turn visual directions into responsive HTML, CSS and JavaScript pages, refine interactions and test across screen sizes.

EXPERIENCE

Independent Front-End Developer | Self-directed projects

Jun 2024 - present

Built seven live website concepts and a published Android app; translated references into responsive layouts, clear page structure and working interactions.

Used AI-assisted coding (vibe coding) for rapid first passes and troubleshooting, then reviewed the code, refined keyboard and reduced-motion behavior, and checked desktop/mobile layouts.

TECHNICAL STRENGTHS

- Responsive HTML, CSS and JavaScript
- Landing pages, web interfaces and scroll-triggered animation
- AI-assisted rapid prototyping, code review and iterative refinement
- Website chatbots and n8n web automations with human approval steps
- Mobile and desktop visual QA, including reduced-motion checks
- Maintainable source files, image optimisation and clear handoff

SELECTED WORK

Flipa Studio - published Android app

Open Google Play

Built drawing tools, frame/layer controls and GIF export; reached 500+ Google Play downloads by Sep 2026.

Mihai Vlad Portfolio - live front-end work

Open live site

Built a responsive portfolio for seven independent website concepts, with keyboard controls and reduced-motion behavior.

NOD Construct - live construction concept

Open live site

Translated a construction story into a responsive page with a staged scroll sequence and clear reading order.

Fluxora - live AI and Web3 concept

Open live site

Built a responsive two-chapter technology concept with character-led visuals and separate AI and Web3 sections.

PROTOTYPE AND AUTOMATION

TenderProof (independent B2B demo): Built an evidence-capture interface with proof cards, search/filtering, quality cues and JSON export. Prepared two n8n workflows for opportunity research and alerts using Apify and Telegram. Both workflows are inactive prototypes with human oversight, not client deployments.

AVAILABLE NOW Front-end tasks, web prototypes, n8n workflow pilots and small paid trials.

Websites are independent concepts, not client case studies. App downloads: Google Play, Sep 2026.
